

SKYLIGHTS by
FAKRO®

Smart & light

Fakro is a world leading roof window manufacturer, well renowned for their high standard of materials and workmanship.

Incorporating Fakro Skylights into your home or office building can bring an abundant amount of natural light, fresh cooling breezes and a beautiful sense of space, so you can live in a more comfortable and healthier environment all year round.

A modern trend to indoor living

Contemporary Fakro Skylights have superior design features including beautifully lacquered timber frames and a highly energy efficient, clear insulating glass unit. This allows light to filter into your home without the worry of an excessive build up of unwanted heat, and ensures that your home will stay cooler in summer and warmer in winter.

Designing your home with Fakro Skylights

Stylishly improve the quality of your living space with additional light and add value to your home with a Fakro Skylight.

Built with toughened glass on the exterior, Fakro Skylights present ultimate strength and durability to shield your home against unpredictable stormy conditions. Laminated glass on the interior significantly reduces sound transmission, provides protection from fading household goods and fully complies with the Australian Standard 1288 (Overhead Glazing section).

With three models available in a range of standard sizes, the Fixed, Opening and Electric Opening Skylights all have blinds and accessories to match. From commercial multi-unit applications, to living area renovations or attic conversions, there is a Fakro Skylight for every application and budget.
